

# Jaw Motion Rehab Systems: The OraStretch™ Press And TheraBite Systems

The **OraStretch™** Press and **TheraBite** jaw rehab systems are handheld passive motion devices designed for the prevention and treatment of trismus, scarring, surgical rehabilitation, pain and joint dysfunction.

The **OraStretch** press and the **TheraBite** move along the natural anatomical motion of the jaw for easy, safe rehabilitation. They each have safety limits for control and to prevent overstretching.

The **OraStretch** press provides therapy for patients from smaller openings to a full 50mm range-of-motion.

The **TheraBite** system is limited to a maximum 35mm. As reference, using a fork can require a 30-35mm ROM.

The **OraStretch** press and **TheraBite** system both come in a standard size, and edentulous pads are available.

The **TheraBite** system also comes in a pediatric version for patients under-10, and offers a handle slide.

The **OraStretch** system is smaller, more lightweight and ergonomic for daily use and carrying. It also has an intuitive design and side scale, making it easy to use and read by patients and providers.

Both devices bill under the E1700 code and have the same insurance coverage. CMR bills insurance and initial appeals for patients ordering a jaw motion rehab system.

## Jaw Rehab Systems Comparison

Specifications	OraStretch Press	TheraBite System
Natural Motion Jaw Therapy	Yes	Yes
Maximum Opening	<b>50mm</b>	<b>35mm</b>
Versions	Standard	Std, Pediatric
Adjustable safety limit screw	Yes	Yes
Weight	<b>3.8 oz</b>	<b>7.7 oz</b>
Intuitive side scale	<b>Yes</b>	<b>No</b>
Up-front payment due	<b>50% deposit</b>	<b>Full Price</b>

### OraStretch Press:

- Opens 15mm wider for a full, functional ROM
- 50% lighter weight
- Small size is easier to carry
- No full up-front payment
- Readable, intuitive scale
- Softer pads

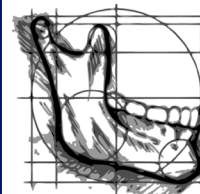

### TheraBite System:

- Pediatric version (<10 y.o.)
- Handle slide

### New ROM Scales

- Disposable professional packs of 50 scales
- Easy to use on small openings
- More intuitive design for patient use
